Magnum Research's TTS-22 .22LR suppressed barrel

About

Magnum Research (MRI) opened up a new chapter in its 25 year old history when the Minneapolis, MN based company was purchased by Kahr Arms in June 2010. Kahr Arms, based in Worcester, MA with offices and factories in Massachusetts, New York, Illinois and California is a well known producer of high quality compact handguns and maker of the world famous Thompson submachine guns commonly known as the "Tommy Gun®". Magnum Research's founders, Jim Skildum and John Risdall had been involved with the company since 1979. Both men oversaw the ascent of the Desert Eagle Pistol from a concept on paper to a pop culture icon including a Playboy magazine front cover featuring Pamela Anderson showing off a Pink Desert Eagle pistol.

SPECIFICATIONS:

CHAMBER: BENZ

DIAMETER: .875 inch

BARREL: 16.1 inch

Magnum Research has been working on developing a suppressed .22LR barrel for well over a year. In keeping with its philosophy of Customer Service and extreme performance, it is finally bringing to market the TTS (Tactical Tensioned Suppressed) barrel.

Many issues were addressed, engineered and tested during the development stages of the TTS barrel.

1. It had to shoot extremely well.
2. It had to be light weight.
3. It had to be field serviceable and cleanable.
4. It had to always shoot to the same point of impact when the baffles were removed, cleaned and replaced.

The TTS-22 does it all and comes in at just 1.1lb. The patented barrel utilizes the space inside the outer tensioning tube as well as a monolithic baffle stack to suppress the noise. All of the "guts" are hard coat anodised for easy cleaning.

The TTS-22 barrel will be available in early 2018 on Magnum's semi auto rifles

as well as an aftermarket barrel that will fit all Ruger 10/22 TM non takedown rifles. It features a BENZ chamber, tensioned hammer forged barrel liner, extreme accuracy, .875in diameter, field strippable with no tools and is very quiet. The steel liner inside the barrel is 16.1 inches long, so there is not an SBR event when purchasing it. Easy care instructions are included with each rifle/ barrel sold.

The MLR22ATTTS22 rifle has a 20.5in aluminium barrel and ambidextrous black thumbhole stock.
